# Agenda

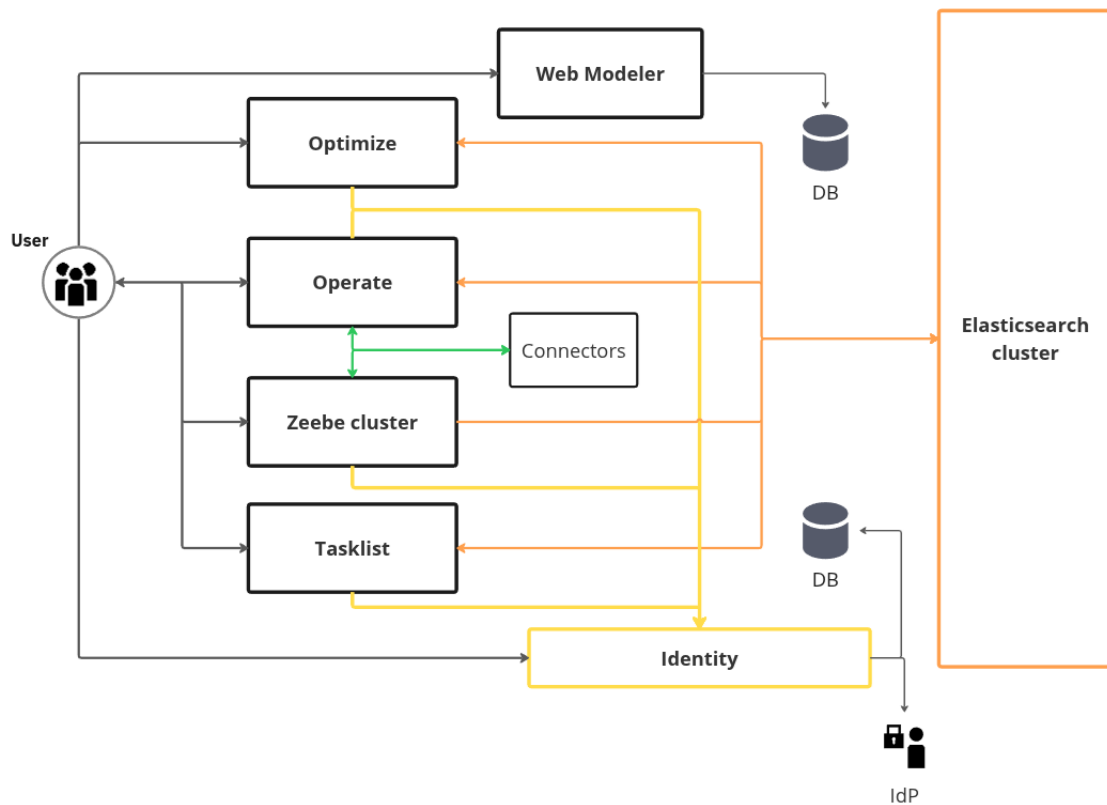

- **Basics**
  - Camunda 8 overview
  - Data flow in orchestration Cluster
- **Challenge(s) - solving cycle**
  - Identify challenges with our current architecture
  - Make a plan to overcome those challenges
  - Implement the solution
  - Evaluate our solution
- **What's next**

# One exporter to rule them all

Software engineering is not hard because we have to create new things.

# Brownfield

Software engineering is not hard because we have to create new things.

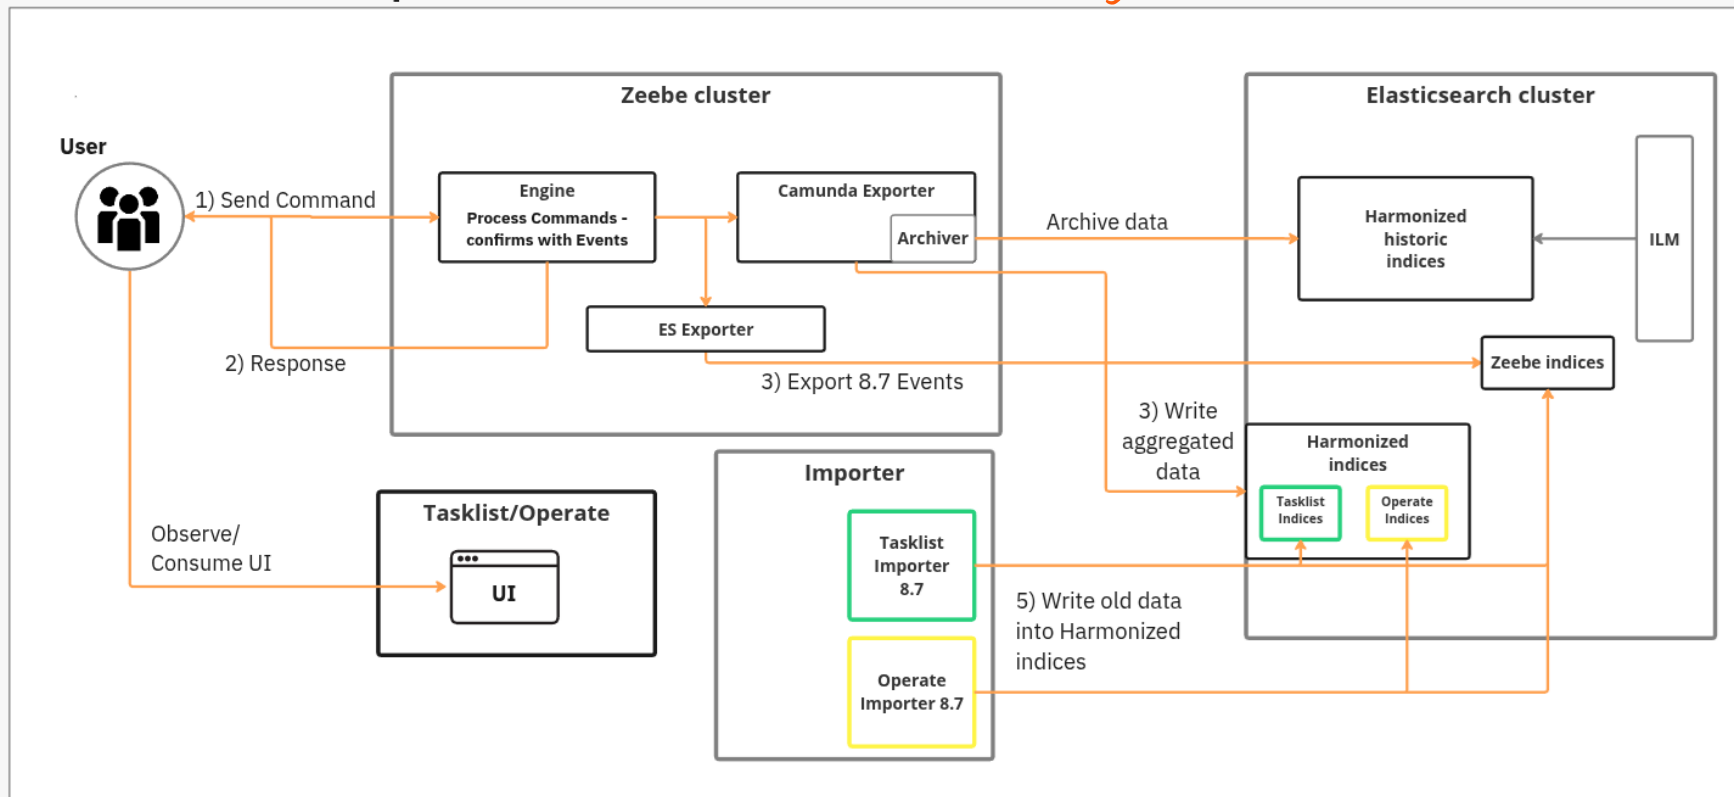

It is hard because we have to maintain old products and versions.

**Several other new possibilities**

# Always improve

All of this to improve and provide a kick-ass user experience;  
and a product you can rely on.
