Business Rule Management

Solution Objective

Camunda decisions have the capability to design and configure business rules to support any organization needs. Enhancing the power of Camunda decisions, our solution addresses the growing dynamic needs of business rule management.

Decision data governance

Apps Connector

- ▶ The solution supports connector service to integrate applications (on-prem/ cloud).

Business Rule Attributes

- ▶ To use master data as input/ output variable values in configuring decision tables.
- ▶ To enable users to use consistent and valid data.

Decision validity

- ▶ Support of multiple versions of business rules with different activation timespan.

Approval workflow

- ▶ Feature to activate approved business rules.
- ▶ Approval workflow with notification and audit log.

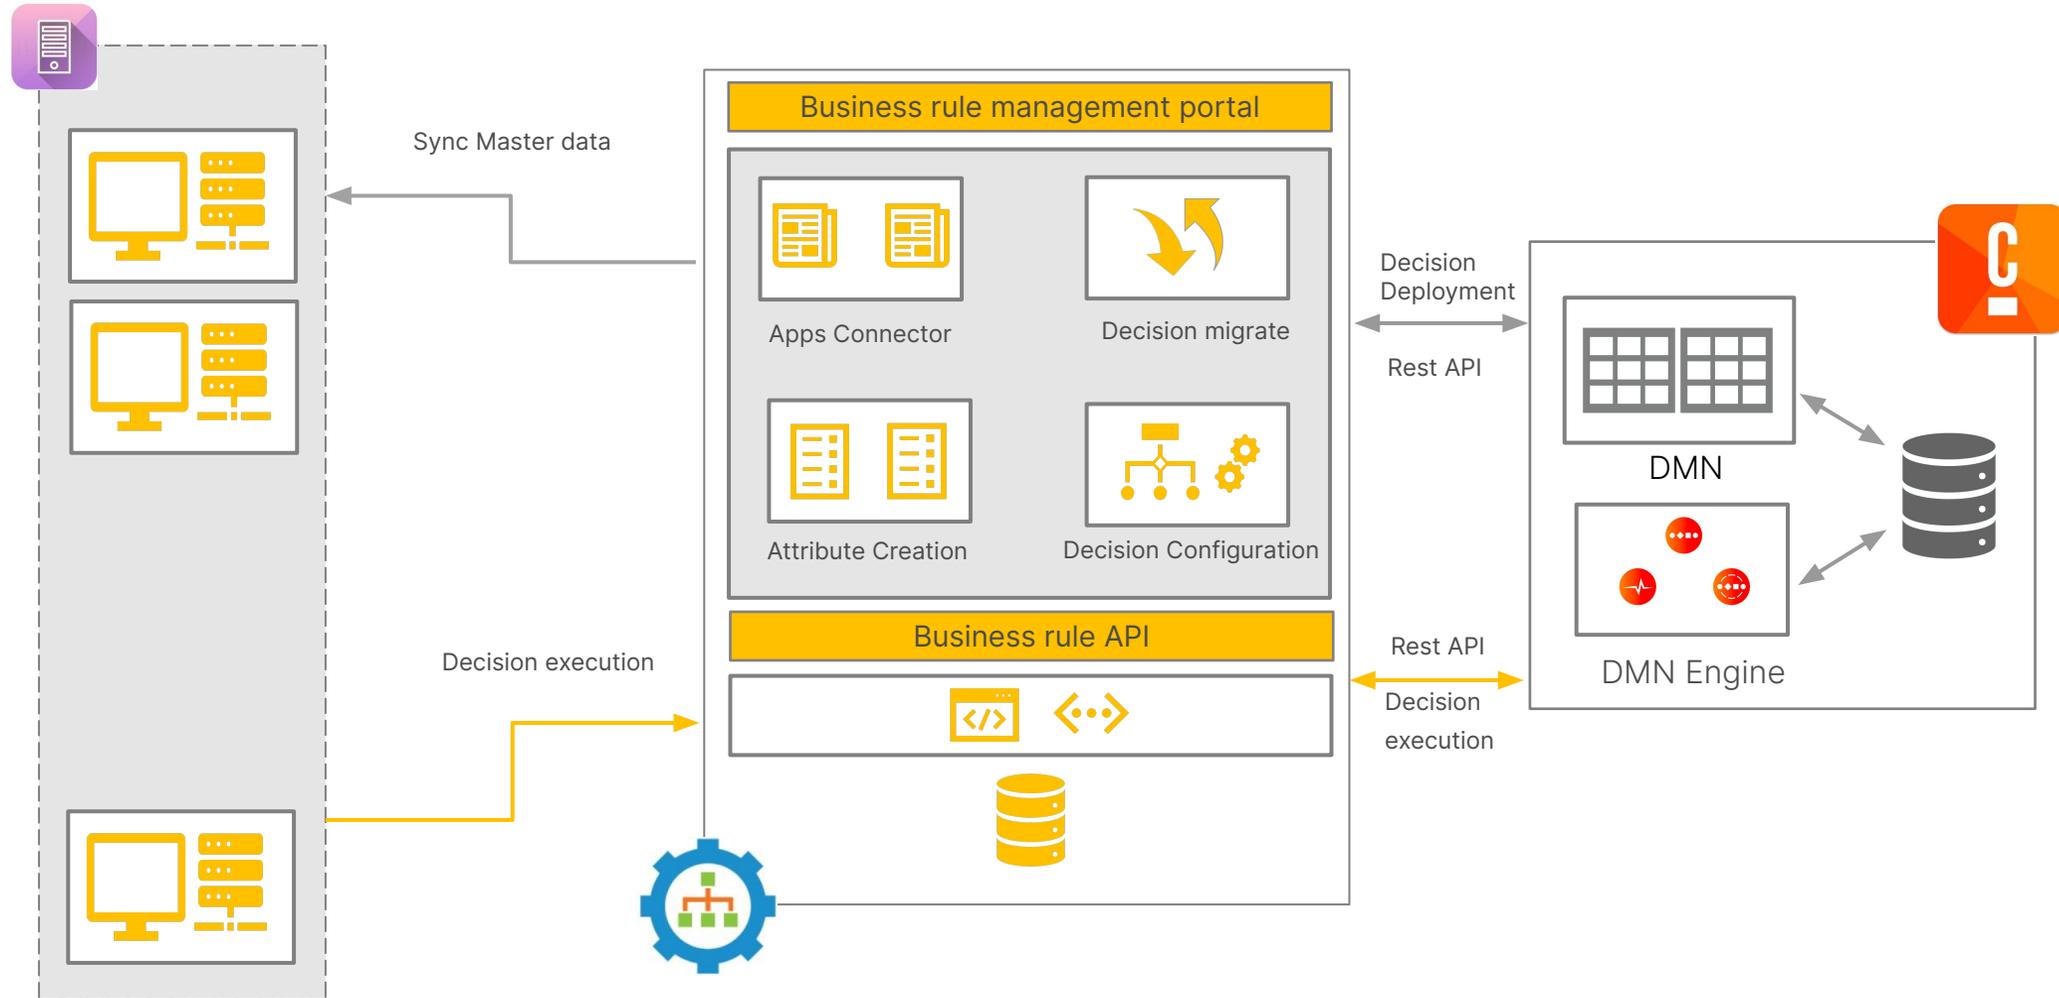

Rule documents

- ▶ Feature to enclose supportive business or policy documents for business rules.
- ▶ Customized dashboard and reports based on rules and business data.

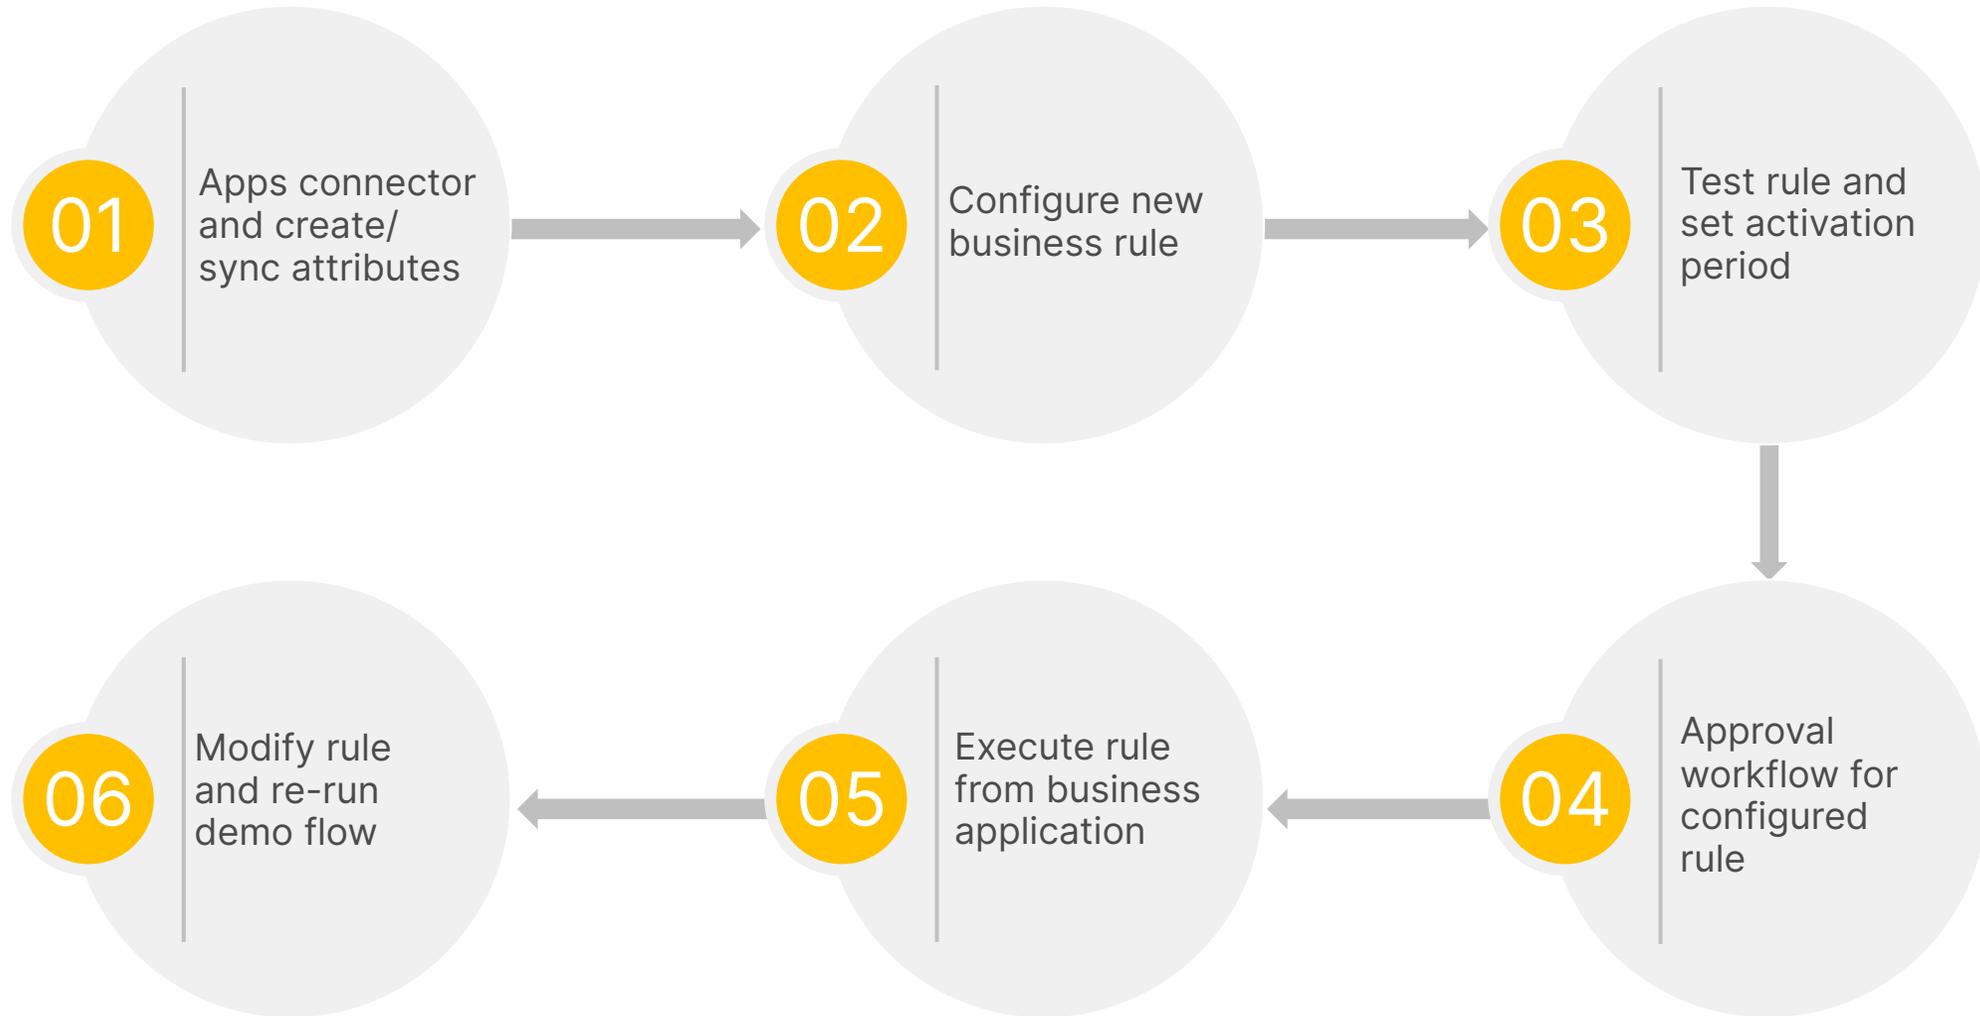

Deployment & migration

- ▶ Import and export feature to migrate business rules across environments.

Architecture Design

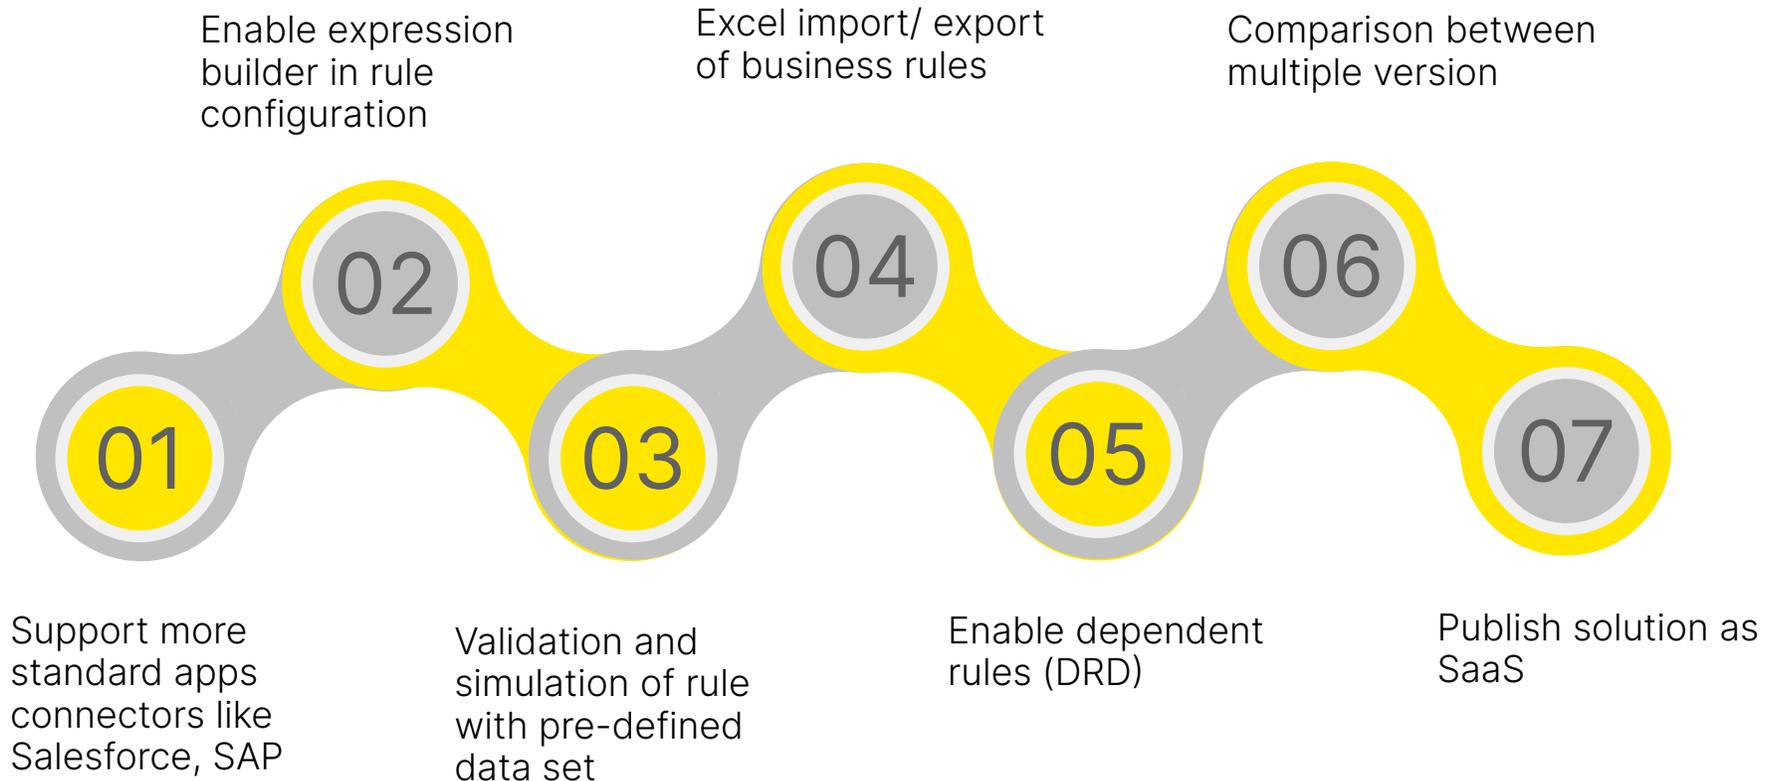

Demo use case
